

Details of footpaths

Yorkley Court Community Farm

Footpath construction and materials

Existing vehicle track ways are constructed from compacted stone and have been historically used by farm vehicles and earth moving machinery .

Footpaths within the development area will be spread wood chip.

Where possible footpaths will be routed to avoid root protection areas (RPAs). Where this is not possible boardwalks will be constructed from planking held away from the ground by wooden supports resting on the ground outside of the root protection area. On larger spans to avoid excessive sagging the planking will be attached atop of a wooden beam ladder framework constructed between the wooden supports.

Boardwalk over RPA
